What's New In ASKY?

ASKY is a versatile utility that can help you easily use the power of CSV files in your daily work. The application provides a powerful Database-like SQLite3 interface for CSV files. As an example, you can insert, update, or delete records, or perform queries against your CSV files. ASKY has three separate tabs for each function; these are the Sifter, Database and Utility. The Sifter tab enables you to detect and fix up misaligned records, identifying those records that are not aligned with the ones in your benchmark file. If you open the file as an example with aligned records, ASKY will place a box of information in the window and mark the misaligned records with an orange marker in the CSV file itself. The Database tab

enables you to manipulate data and records inside your CSV file by inserting, deleting, or moving records, or by modifying the order of the fields in the file. The Utility tab is for advanced queries, enabling you to search for records, add or remove fields, change the format of the date or time, and so on. ASKY features:

1. Detect and fix up misaligned records, highlighting them in red in the CSV file itself.
2. Fix a mismatch between the delimiter and the file format (e.g., no quotes, or different field delimiter)
3. Extract and read all records from the file
4. Search for records
5. Insert, delete, move or re-arrange records in the file
6. Create new fields in the file (multiple fields in the same row)
7. Change the format of date or time
8. Change the order of the fields
9. Filter by various criteria (e.g., field, record type, date or time, etc.)
10. Query the file
11. Export/Import data
12. Remove blank rows from a file
13. Sort data
14. Edit the file (add new record, delete one, etc.)
15. Show error messages
16. Update the file (fix an outdated benchmark file)
17. Reset the benchmark file (if needed)
18. Run a query against the file
19. Convert CSV file to Excel format
20. Select Excel files for conversion
21. Import Excel data to CSV file
22. Resize an Excel file
23. Resize a CSV file
24. Export data from an Excel file to a CSV file
25. Create a CSV file with automatic numbering
26. Create a CSV file with alternating numbers
27. Create a CSV file with random numbers
28. Print a file
29. Print a selected

record 30. Copy records from one file to another 31.
