## **Online Food Ordering System Project in ASP.net FREE.**

This Restaurant Ordering System is developed in VB.net Features The system provides a feature of multi store visit logging. Clients can provide one time orders as well as transactions, both kinds of transaction can be specified as specific transactions so that it can separate the charges when their customers come back on their date in the future. These transactions can be determined as "original transaction" and "transaction history". The system provided a feature to display the location the last order is from. This can be further used to display the detailed location information. Users can monitor the expenses in the restaurant and the overall average expenses using the transaction history feature. It also provides a feature to enable the users to view the transaction by date. This is one of the important features that has many customers interested in it. Different ways of payment available such as cash, credit card and debit card. This system also have a feature to track the services of the employees in the restaurant. Food Court Management System Online Food Ordering System in PHP developed in PHP to serve the requirement for the website. From the top menu - Requirement Analysis, Implementation Project, Testing & Documentation
