You can control which tool you want to use when you open a file and choose the **Edit** tab on the right side of the main workspace. Depending on what the file contains, you may see five different options, as shown in the next figure. These options vary depending on what type of editing you want to perform. **Blend Images** includes both the **Expert** and **Basic** option as well as the **Layers** option. **Make, Red_eye**, and **Zoom** include the **Basic** and **Expert** options in addition to **Layers**. You can either choose the **Basic** or **Expert** options. **Adjust Color** includes all the four tool options of **Basic**, **Expert**, and **Layers** in addition to the **Filter** option. **Remove Noise** includes both the **Expert** and **Basic** options, with or without the **Layers** option. **Adjust Curves** includes the **Basic**, **Expert**, and **Layers** options. **Filters** includes the **Basic**, **Expert**, and **Layers** options. **Transform** includes the **Basic** and **Expert** options, as well as the **Layers** option. **Draw** includes the **Basic**, **Expert**, and **Layers** options. So if you want to use only the **Basic** tool options to edit a file, you can toggle **Basic** for all the tool options. To toggle **Expert** for all the tool options, select **Expert** in the drop-down menu. To access the **Basic** tool options only, you can choose either **Basic** or **Expert** in the drop-down menu for the **Tool Options**. Photoshop actually supports a wider range of editing possibilities than the options shown here. In some cases, the **Basic** option is the preferred method. In other cases, you may want to use the **Expert** options.
