pptPlex is a PowerPoint slide template maker for creating professional slide templates and creating next generation slide show. The ubiquitous green garden frog, *Lithobates catesbeianus*, is the source of both Colorado and Indiana state amphibian populations. The high breeding densities associated with these states is due to heavy use of green garden frogs for commercial frog meat production in the northern part of Indiana and in the central part of the state in the United States. Natural populations of the green garden frog are extremely limited and occur in only three tracts of northern Indiana, in and around tiny Lake Charlevoix. There is only one natural habitat where the entire species is known to occur: this is a small, slow-moving ephemeral marsh (the existence of which has not been documented since 1946). Within this drainage where the entire species is known to occur, the total number of frogs is thought to number between 2,000 and 2,500 individuals. The balance of numbers of larvae and adults therefore depends on environmental conditions, and in fact a single hatching of eggs may result in a maximum of only 250 surviving metamorphosed frogs. In the seven years from 1983 to 1989 this species was extirpated for the first time in 160 years. There is a maximum of only 140 known individuals in the wild. Following the 1983 extirpation, captive-breeding programs were initiated and proved successful. Restored populations were reintroduced into Lake Charlevoix in 1994, and in 1997 a population was successfully established by the United States Fish and Wildlife Service in Marion County, Indiana. In the following years, however, the population has declined in number of frogs and is likely to be extirpated at some point in the future unless the species is successfully reintroduced into a different site. The exact fate of the populations in northern Indiana is currently unclear, and there are strong arguments for trying to establish a viable and long-term population at some other site. The success of the Indiana release has demonstrated a very high degree of adaptability of the green garden frog. It can survive without access to food, and in the wild no foraging of any kind has been detected. Additionally, it is tolerant of a wide range of temperatures, although it has the capacity to survive extremes down to -50.0 degrees F. In the wild, the preferred temperature is about 45.0 degrees F, although temperatures of up to 65.0 degrees F are tolerated. Sexually mature adults have been recorded over the entire

pptPlex Product Key is a plugin for Microsoft Office PowerPoint 2007 that offers several alternatives when it comes to putting together a slides presentation. After a brief installation procedure, pptPlex creates a ribbon bar in PowerPoint, right next to "View". So, you can get an overview on all the slides contained by a presentation, as well as navigate them with the pan tool, starting from the first or current slide. You can better organize your slides by dividing them into sections that you can apply labels to, as well as easily move these areas to any position in the deck. In addition, pptPlex allows you to select one of the 13 available templates for the canvas background. Therefore, your PowerPoint presentation will look like a tour via a canvas that you can zoom into, rather than the common linear sequence of slides. Furthermore, you may add live content from an Office or Word document, Excel spreadsheet, Visio diagram or another PowerPoint presentation. Several configuration settings are available through this plugin. For example, you can choose the slide transition type (none, spatial, bounce), apply settings to all slides or individually, as well as pick the slide arrangement mode (simple, spiral, zig-zag, special) and what parts to show (title, number). The small app includes user documentation, has a good response time and uses a very low amount of CPU and system memory, so it doesn't affect PowerPoint's overall performance. It has a good response time and didn't cause us any issues during our tests, such as freezing, crashing or popping up errors. All in all, pptPlex should please all users who are looking for interactive means to present PowerPoint projects.

QuickTime Codec QuickTime is an audio and video codec, which is part of Apple Inc.'s QuickTime multimedia framework. It provides a way for digital video and digital audio files to be encoded and played on a computer running the QuickTime software. It does so by letting the computer play files of either type in an interactive virtual container, in contrast to standard playback methods that merely dump files of a type into a computer for later playback. While most computers have QuickTime installed, a Mac must have QuickTime 7, as an earlier version is incompatible with QuickTime Pro 7. As of version 8, QuickTime Pro 7 is included with Mac OS X. QuickTime is the best established of the video codecs with over a million install on computers and being included as standard in many popular programs. It is, however, very complicated and b7e8fdf5c8

## What's New In PptPlex?

Present your presentation with all the features you need. This is the last PowerPoint presentation tool you will ever need. Users may divide your slides into separate sections Section titles may be printed Use pptPlex to set a canvas presentation with a special, interactive PowerPoint View. This sort of presentation is completely organized by PowerPoint's current presentation collection. Slide titles are displayed in your document itself. pptPlex Homepage: Finding the number of solutions of  $x^k - y^k = 1$ , given  $x^2 = y^2$  I just want to state that this problem is unrelated to that posted here. I am looking for a general, perhaps non-solution-specific, approach to the problem. Given the equation  $x^k - y^k = 1$  where  $x$  and  $y$  are positive integers with  $x^2 = y^2$ , I wish to find the number of positive integer solutions. The most elementary approach is to look for the solutions to the Pell's equation  $x^2 - dy^2 = 1$ . Given the fact that  $x^2 = y^2$ , it can be shown that if  $d=1$  then there exists at most one solution, and if  $d=-1$  then there can be at most two solutions. If  $d=-1$  and  $x$  is even, then  $x^2$  must be even. This is impossible. Thus, we are left with the case  $d=1$ , i.e.,  $x$  and  $y$  are relatively prime. It is rather cumbersome to explore these cases by brute force, especially for large  $k$ . Any further ideas on a more clever approach? A: Using the function "Szonyi-Lindemann-Waldschmidt" I get that the number of positive integer solutions is bounded by  $k-1$  if  $k$  is even and by  $k$  if  $k$  is odd. If  $k$  is even, this follows from the fact that  $x^2 - y^2 = (x-y)(x+y)$  and if  $k$  is odd, it follows from  $x^2 - y^2 = 1 + (x-y)(y+1)$ . If  $n$  is a positive integer and  $0$
