A self-driving van, launched by Volvo late last month, is one example of a fleet deployed to gain insights into how people will operate and navigate new autonomous vehicles on public roadways, as well as how traffic and other passengers will react to driverless vehicles. Such early deployments will provide companies with a test bed to research the many different permutations of how self-driving fleets will operate before going to market — and in many cases, before they are allowed to operate on the public roads. But as companies begin to deploy fleets in the coming years, there are a number of non-tech concerns about what to do about self-driving vehicles and the way consumers will interact with them, not to mention what to do with the vehicles themselves. Already, companies are starting to survey what happens when autonomous vehicles are involved in accidents, and several have placed the onus of vehicle safety on the manufacturers, rather than on consumers. In California, regulators passed a law last year that will require all autonomous vehicles to have a c6a93da74d
